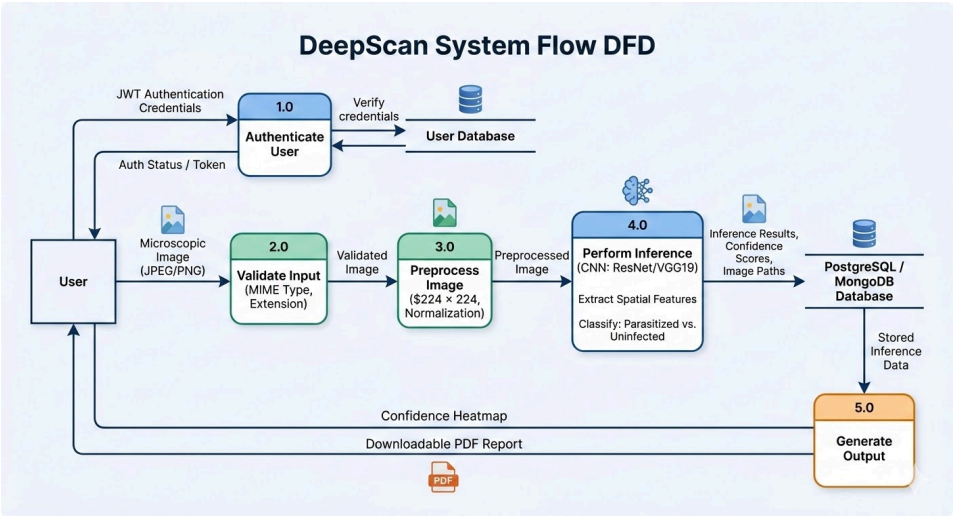
Project Design Phase-II: Data Flow Diagram & User Stories

Date	16 jan 2026
Team ID	Not received
Project Name	Malaria Detection
Maximum marks	4

1. Data Flow Diagram (DFD) Description

A Data Flow Diagram represents how information moves through the DeepScan system, from the initial image acquisition to the final diagnostic report.



2. User Stories

The following table outlines the functional requirements for the different stakeholders of the DeepScan platform.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Lab Technician	**Authentication**	US-01	As a lab technician, I can log in securely using my credentials.	I can access the diagnostic dashboard upon successful login.	High	Sprint-1
Lab Technician	**Diagnosis**	US-02	As a user, I can upload microscopic images for automated malaria screening.	The system returns a classification result within 2 seconds.	High	Sprint-1

Healthcare Provider	**Reporting**	US-03	As a provider in a rural clinic, I can download a PDF report of the diagnosis.	A formatted PDF is generated with the patient ID and result.	Medium	Sprint-2
Medical Researcher	**History**	US-04	As a researcher, I can view historical diagnosis logs to track trends.	I can filter and view past results stored in the database.	Low	Sprint-2
Administrator	**System Management**	US-05	As an admin, I can monitor API latency and system CPU usage.	I can view real-time metrics on a Prometheus/Grafana dashboard.	Medium	Sprint-3
